

## DEPTH-FIRST SEARCH

**AIM:** To implement a depth-first search problem using Python

- Depth-first search (DFS) algorithm or searching technique starts with the root node of graph G, and then travel deeper and deeper until we find the goal node or the node which has no children by visiting different node of the tree.
- The algorithm, then backtracks or returns back from the dead end or last node towards the most recent node that is yet to be completely unexplored.
- The data structure (DS) which is being used in DFS Depth-first search is stack. The process is quite similar to the BFS algorithm.
- In DFS, the edges that go to an unvisited node are called discovery edges while the edges that go to an already visited node are called block edges

### Depth First Search

## CODE:

```
def dfs_recursive(graph, start, visited=None):

    if visited is None:
        visited = set()
    visited.add(start)
    print(start)

    for neighbor in graph[start]:
        if neighbor not in visited:
            dfs_recursive(graph, neighbor, visited)

graph = {
    'A': ['B', 'C'],
    'B': ['A', 'D', 'E'],
    'C': ['A', 'F'],
    'D': ['B'],
    'E': ['B', 'F'],
    'F': ['C', 'E']
}

print("DFS Recursive:")
dfs_recursive(graph, 'A')

def dfs_iterative(graph, start):
    visited = set()
    stack = [start]

    while stack:
        vertex = stack.pop()
        if vertex not in visited:
            print(vertex)
            visited.add(vertex)
            stack.extend(neighbor for neighbor in graph[vertex] if
neighbor not in visited)

graph = {
    'A': ['B', 'C'],
    'B': ['A', 'D', 'E'],
    'C': ['A', 'F'],
    'D': ['B'],
    'E': ['B', 'F'],
    'F': ['C', 'E']
}

print("DFS Iterative:")
dfs_iterative(graph, 'A')
```

## OUTPUT:

The image shows a Jupyter Notebook interface with a file named '220701014.ipynb'. The notebook has two tabs: 'Code' and 'Text'. The 'Code' tab is active, displaying the following output:

```
DFS Recursive:  
A  
B  
D  
E  
F  
C  
DFS Iterative:  
A  
C  
F  
E  
B  
D
```

The interface includes a top menu bar with 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help'. On the right, there are icons for 'Share', 'Settings', and 'Help'. A status bar at the bottom shows 'RAM' and 'Disk' usage, along with a 'Gemini' button.
